I met several canoes which had been on their way out but returned to show me the passage into the reef of Faraulip Island. The three islands of this atoll are low islands. The coralline soil is overgrown with healthy specimens of coconut palms, breadfruit trees, bananas, Cystoeperma edule, some tobacco, and some pandanus and betel trees.

Ringworm seems to be widespread on this island; I noticed three cases of elephantiasis.

Ifalik

A small passage leads into the [MR: Ifalik] lagoon, which was formerly used by a Spanish man-of-war.... There are three very attractive islands on the reef.

The style of the houses [MR: on Eauripik] is very striking. The basic lines are those of the tabinau and bäwai of Jap. The foundations are of coral rocks; at one assembly house they were over two meters high. The gables jut out over the framework. Since there is very little bamboo wood on these low coral islands, the walls of the houses are made of coconut fronds or of planks.

A few of the palm trees had been attacked by coconut scales, and I ordered that the fronds of those trees be cut down and burned. There is a large number of rats on the island, which do considerable damage to the palms.

Aurupik

Aurepik is an atoll comprising four islands, Aurepik, Uau, Pikefaj, and Elangkitegit, of which the first two are inhabited. The vegetation is the same as that on the other atolls. Coconuts trees are predominant here also.

The total population consists of a single family, 48 people in all. They are all attractive, healthy people. [195] There are 17 men, 18 women, and 13 children. The head of the family, a native of Jap by the name of Malai, told me the story of their origin. About 45 years ago, he and two other men from his island had gone to Palau; they lost their course and were stranded on Aurepik, a distance of five hundred nautical miles. Aurepik at that time had a large population. One of the two men with him died and the other made an attempt to sail back to Jap but was never heard from again. He himself remained on the island and married there. Once the entire population went on the customary expedition to Oleaĭ; his wife had just given birth to a child so that he and his mother-in-law remained behind to stay with her. The expedition never arrived in Oleaĭ and was never heard from again. About a year later a tidal wave swept over the entire island of Aurepik and destroyed all the vegetation so that for a long time he lived only on crabs and shells. His wife had born him nine more children who, when they were older, married natives from Ileaĭ and brought them back to the island.

There is no passage into the lagoon, but the boats may pass over the reef at high tide. The reef is covered with trepang, but it is of a poor quality.
